

REALTEC

TECHNICALLY ENHANCED WOOD VENEER

RealTec Veneer sheets are produced through a unique, new process that enables us to offer large quantities of Fiddleback Figured wood species, some of which are available commercially and others that are not currently available commercially naturally. This unique process cannot be sanded out, nor will staining or dying do away with this unique Fiddleback Figure, it is in to stay.

RealTec Veneer species offer the following great benefits:

- All faces are Q.C. Architectural Grade Real Wood Veneer.
- All sheets are Sequenced Matched to each other from the same flitch.
- All **RealTec** species are available with: SanFoot, SanPly-3, SanPly-4, PlyTec and TransTec backers. Species offered at this time are: Afrormosia, Anigre, Bubinga, Mahogany-African, Makore, Mutenye, Ovangkol, Sapele, and Sycamore.
- **RealTec** sheet sizes vary based on your backer choice. Sheet sizes available are 3' & 4' widths as a standard and lengths range from 7' to 10', other sizes may be available upon request.
- Maximum radius ability in the industry, 1/4" end grain bend and 90 degrees side grain.
- Consistent figure pattern from sheet to sheet.
- Largest sequencing number of sheets in the industry.
